1. How would you define successful co-management?

2. Currently, is ice seal co-management being accomplished successfully? Explain…

3. What is the most important job(s) of the Ice Seal Committee? Is the ISC doing its job?

4. What is working well with the ISC? What can the ISC do better?

5. What are the areas of greatest need with the ISC? (Please rank in importance)

6. What should the ISC be doing that it currently is not? (Please rank in importance)

7. What are the future needs for the ISC? (Please rank in importance)

8. Please describe your ideal "vision" of what you hope the ISC could be in 5 years.

9. Would you like the ISC to grow? If yes, then please describe how…

10. Do you use and/or tell other people about the ISC website (www.iceseals.org)? How would you like to see website improved?

11. Are there other technologies that you are interested in adopting for use in ice seal co-management? (e.g., portals for local observations, IK, etc.)

12. Do you value meeting in-person?

13. How would you characterize the job description of the executive manager?

14. Prioritize the following:

    a. use of Indigenous Knowledge (IK) for co-management

    b. documentation and management of IK

    c. scientific research sponsored directly by the ISC

    d. full-time ISC staff (e.g., director? manager?)

    e. outreach / education (e.g., teach public about ISC issues; teach youth traditional skills)

    f. recruiting next generation of ISC members

    g. coordination with other co-management organizations

    h. training of ISC membership (e.g., tech skills, sampling, science literacy, etc)

    i. training for other community members (e.g., train hunters to collect samples, collect data, attach satellite tags, etc.)

    j. hold meetings in villages (i.e., not always in Anchorage)

    k. seek tribal authorization of the ISC

    l. regional authorization of the ISC

15. Is there anything else that you'd like to add that has not been covered in this questionnaire?
